Sign Language

The first known sign language was developed in France by people who were deaf. It was used to make the letters of the alphabet and numbers visible. Sign language uses hand movements to communicate. It is a useful tool for people who are deaf or hard of hearing. In sign language, the hands are used instead of words. People can learn how to read Braille, a system of writing for blind people. Braille is a system of writing that consists of a pattern of raised dots based on the six dots of a braille cell. People can learn how to read Braille, which is used to read the six dots of a braille cell.
